

Reports Generated from CVR Data: Explanations and Examples

See report examples at
the end of this exhibit.

When submitting CVRs to Ahlers & Associates, the information is added to a database that stores each visit as a separate record. Clinics or agencies can then use the data in one of two ways: (1) Review the standard reports that Ahlers produces (descriptions follow in this appendix), or (2) create customized tabulations using the **Build a Report** feature on the Ahlers website.

Standard Reports and Tables

Standard tables may not include all clients depending upon which reports are viewed. The data are grouped into report batches, each of which includes a different portion of the total client population. Report batches available are:

1. **Region X Management Reports** include all visits at Title X-funded clinics, regardless of the type of client or source of payment for the visit. These reports are generated for quarters, fiscal year, and calendar year.
2. **Oregon Management Reports** include all visits for which CCare was the source of payment. Visits at both Title X and CCare-only clinics are included. These reports are generated for quarters, fiscal year, and calendar year.
3. **All Sources of Pay** reports include all visits to all sites, no matter the source of payment. They are produced only for calendar year and fiscal year.

Coding on Tables

Tables are compiled quarterly, by calendar year, and/or by fiscal year, and are coded for easy identification. Some tables are not produced in all versions.

- **QL** = Quarterly table (cumulative)
- **AL** = Annual table (Jan 1 – Dec 31)
- **FL** = Fiscal table (July 1 – June 30)

Ahlers produces a wide variety of standard tables available in any of the report batches described above. Brief descriptions of the most frequently used tables follow.

Table 1: Services by Purpose of Visit

Table 1 lists the total number of medical counseling and referral services provided to clients for all their visits during a given period, categorized by purpose of visit as listed in CVR Section 12. If a client was seen more than once during that time period, all the services from those visits are counted.

The % (percent) column between each visit type is calculated only for those services required by Title X guidelines as part of a complete initial or annual exam. (Remember, the annual exam is no longer required, but the percent column remains.) The percentage indicates how many times a particular service was performed within that visit category. Example: the **Initial Medical** column shows that 7,045 blood pressures were taken for the year; the next column specifies 97.7%. This means that blood pressure tests were conducted at 97.7 percent of initial exams.

Table 2: Client Counts by New/Continuing and Gender

Table 2 provides unduplicated client counts for assigned source of payment (CVR Section 9), federal poverty level (CVR Section 10), and race (CVR Section 6a), broken down by new clients, continuing clients, and gender. *Unduplicated* refers to the fact that a client is counted only once, even if the client had more than one visit during the report time period. The last visit for that time period is the one described, regardless of whether the client is new or continuing.

Considerations: Numbers on the quarterly tables are cumulative for a calendar year (i.e., the second-quarter table includes data for that quarter and the first quarter). However, data on the calendar-year table *may differ* from those on the fourth-quarter table, because the calendar year table may include CVRs submitted after the fourth-quarter table was printed. Also, the total under 'race' might be larger than the total client number because clients are allowed to check more than one race.

Table 3: Unduplicated Client Count by Age

Table 3 provides data for assigned source of payment (CVR Section 9), federal poverty level (CVR Section 10), race (CVR Section 6A), and ethnicity (CVR Section 6) broken down into various age ranges. The client's age is calculated by subtracting the client's date of birth (CVR Section 4) from the client's date of visit (CVR Section 3).

Table 4: Initial & Annual Clients, Poverty by Source of Pay

Table 4 compiles data for clients who had an initial visit or an annual visit. It tabulates clients by source of payment (CVR Section 9) and federal poverty level (CVR Section 10). The computer calculates the federal poverty level using the most current federal poverty guidelines, the monthly family income, and family size. These data apply solely to the reported period; they are **not** cumulative.

Table 5: Contraceptive Clients by Male/Female & Age

Table 5 shows clients' after visit methods of contraception — or reason for no method — (CVR Sections 15A and 15B), broken down by gender and age. These data apply solely to the reported period; they are **not** cumulative.

Table 7: Theoretical Estimates of Pregnancies Averted

Table 7 shows the number of clients using each different contraceptive method before their visits (CVR Box 15A, Before Visit) and after their visits (CVR Box 15A, After Visit), by age (19 & under vs. 20 and over). It also lists the expected failure rate (per 1,000) for each method. In Table 7A, this information is used to produce a theoretical number of pregnancies averted, by subtracting the estimated number of pregnancies that would occur given clients' ending contraceptive methods from the estimated number that would have occurred if clients had kept their beginning contraceptive methods. The pregnancies averted number is also broken down into expected births, abortions, and miscarriages, based on the national frequency of each pregnancy outcome. This table is compiled for calendar and fiscal years; there is no quarterly version.

Table 12: Client Age by Type of Service

Table 12 shows the number of medical services (CVR Section 13A) provided to clients by client age. This table is only available in the Region X reports.

Table 13: Unduplicated Client Counts by Race/Ethnicity

Table 13 provides data for assigned source of payment (CVR Section 9) and federal poverty level (CVR Section 10) broken down by client ethnicity (CVR Section 6) and race (CVR Section 6a). This table is also only available in the Region X reports.

Table 26: Visits of New/Continuing Clients with a Pregnancy Test Performed

Table 26 provides information on age, race/ethnicity, poverty level, source of payment, and purpose of visit of clients who had a pregnancy test performed. Data are broken down by new/continuing status, by the test result, and whether a positive pregnancy was planned or unplanned.
