The online STD Case Series provides free continuing education for healthcare practitioners who work with persons with or at risk for sexually transmitted disease. Each case includes a visually engaging, interactive patient presentation which simulates an actual clinical encounter. Most cases can be completed within one hour with continuing education available at no charge. Cases are written by leading experts in STD clinical care and prevention.

The Practitioner’s Handbook for the Management of Sexually Transmitted Diseases

*The Practitioner’s Handbook* is designed to assist practitioners in primary health care, family medicine, emergency medicine, and other specialties in the optimal management of patients with sexually transmitted diseases (STDs) and their partners. *The Practitioner’s Handbook* is accessible as a full HTML website. Additionally, separate PDF documents are available to download for each section of the book, organized by disease syndrome, and illustrated with clinical and laboratory images, diagrams and management algorithms.
