

**OVERS release 13.0**  
**April 22, 2013**

**Changes to death certificate functionality**

Once the system is available you may notice the following minor changes in functionality.

1. **Fix to the age calculator** - In the January release of OVERS, we discovered that the age calculator on the decedent page was calculating incorrectly when the month and day of birth of the decedent was within a few days of the month and day of the date of death. The issue only affected a few death certificates but that issue has now been fixed.
2. **Improvement to address functionality** - In the address field on the "Residence Address" page the Street designator now auto-fills if you type in the first letter or two of the word you intend to enter. (Example - If you type an "S" the word "Square" will auto-fill and if you type "St" the word "Street" will auto-fill.)
3. **Change to the search tool** for the "Place of death" page, the "Request Medical Certification" page, and the "Refer to Medical Examiner" pages. *(This change was not requested by Oregon and we are exploring options to return the search functionality to the way it worked prior to this release of OVERS.)*
  - **"Place of death" page search tool**- The wild card (%) you use when looking up facility names on the "Place of Death" page has changed. Starting Monday, April 22<sup>nd</sup> you will need to **enter the first 2 letters of the facility name before the %** to get search results. You can no longer use the % as a wild card by itself nor will the % sign work before entering letters (see examples below).

If you want to find the exact name of a licensed hospital, assisted living facility, residential care facility, or nursing facility facility you can look it up on a list provided on the state website. You will find links to the lists on our OVERS FAQ website at <http://bit.ly/oversfaqs>

- **“Request Medical Certification” and “Refer to Medical Examiner” pages search tools** - The search tool on the “Medical Certification Requested” and “Refer to ME” pages and is used for looking up both medical certifier names and the facilities with which the medical certifier is associated. When looking up the medical certifier’s name or the facility name, **enter the first two letters of the name before the % sign** to find the facility associated with the medical certifier. See the FAQ page of our website at <http://bit.ly/oversfaq> for details on this new functionality.

Lookup Medical Facilities

Facility Name:  Search

*Works*

Facility Name	Address	City	
Adventist Medical Center	123 SE Any Street	Portland	<a href="#">select</a>
