

Chlamydia

Chlamydia is Oregon's most commonly reported infection. The 7,200 cases reported during 2002 are 304 (4.1%) fewer than 2001. As with gonorrhea and syphilis, *Chlamydia* are transmitted by sexual contact. Chlamydia is likely to be a silent infection, with neither men or women having symptoms. However, reproductive health complications, especially among women, lead to infertility and an increased risk of tubal pregnancy.
