

**OREGON NOROVIRUS WATCH, JUNE 2016.** This issue of *Oregon Norovirus Watch* includes norovirus outbreak data from the 2015–2016 norovirus season.

In the month of June 2016, 19 norovirus or norovirus-like outbreaks were reported, of which 10 (53%) were in nursing homes, 3 (16%) were in schools and 6 (32%) in other settings. Since June 2015, 90 (53%) of 171 lab-confirmed and norovirus-like outbreaks occurred in nursing homes or assisted-living facilities (Fig. 1). Over the last year, GII.4 Sydney was identified in 16 (23%) of 69 lab-confirmed outbreaks. The number of outbreaks with cases positive for norovirus GII.4 Sydney continues to decrease (Fig.2). Interestingly, we have seen an increase in GII.2 genotypes since the beginning of 2016 (n=17, 25%).

Figure 1. Laboratory-confirmed norovirus & norovirus-like outbreaks by setting type and month Oregon, June 2015 - June 2016 (n=171)

LTC: long term care ALC Assisted living facility \*\*"Other" includes hotels, workplaces, private homes, caterers

Figure 2. Laboratory confirmed norovirus by genotypes and month in Oregon, June 2015 - June 2016 (n=69)

\*69 (40%) of 171 suspected norovirus outbreaks have been confirmed by positive lab results from ≥2 patients.
