Health advisory lifted for Blue Lake Regional Park
Reduced blue-green algae levels confirmed

A health advisory issued August 28 for Blue Lake Regional Park, located three miles northwest of Troutdale in Multnomah County, was lifted today by the Oregon Health Authority. The advisory was prompted by high levels of blue-green algae found at the lake's southwest shoreline.

Water monitoring has confirmed reduced levels of blue-green algae and their toxins. These reduced levels are not likely to be harmful to humans and animals.

Oregon health officials advise people who recreate in Oregon water bodies to always be alert to signs of algae blooms. People and their pets should avoid contact if the water is foamy, scummy, thick like paint, pea-green, blue-green or brownish red in color, or if a mat of algae is visible in the water.

For local information contact the Portland Metro Regional Parks Department at 503-797-1844. For health information, contact the [Harmful Algae Bloom Surveillance](#) (HABS) program at 971-673-0400. Also contact the Oregon Public Health toll-free information line at 1-877-290-6767.

The Harmful Algae Bloom Surveillance program is funded through September 2013 by a grant from the federal Centers for Disease Control and Prevention.
