

TWIST Tips: Formula Changes for February – May 2014

FPA Changes after truncation

1. Similac Sensitive for Fussiness and Gas (SSF) or Similac Total Comfort (STC) will not appear on the formula drop down after February 1. This will help keep staff from accidentally assigning these formulas to participants.
2. TWIST will find any participant assigned either Similac Sensitive for Fussiness and Gas (SSF) or Similac Total Comfort (STC) in May or later and will substitute Similac Advance in those rows on the FPA. This gives participants currently using these formulas 3 months to transition to another formula and gives a firm end point for issuance. See the example below.
3. Staff should not try to forecast any Similac Sensitive or Similac Total Comfort packages as it may cause problems with future months or saving changes.
4. Similac Sensitive and Similac Total Comfort will be available in the Module Search screen and should only be used to adjust the quantity of these formulas assigned for February, March, or April.
5. If you accidentally print vouchers for these formulas for May or later, you will need to void them and replace them with a WIC eligible formula.

FPA and FSS codes

| These formulas: | | Will change to this formula for May 2014: | |

Running the “Participant Use of Food Code” report

To find out who in your agency is currently assigned one of these formulas, run the “Participant Use of Food Code” TWIST report. Use the following food codes to find the participants on the impacted formulas:

- FRB05 Similac Sensitive Powdered
- FRB06 Similac Sensitive Concentrate
- FRB07 Similac Sensitive Ready-to-feed
- FRB08 Similac Total Comfort Powdered
