

Number of containers allowed by age and/or category

Key: Medical Formulas in WIC refer to any formula other than the current milk-based or soy-based bid formula

IB = Infant who is mostly breastfeeding

IBN = Infant who is breastfeeding some

IN = Infant who is non-breastfeeding

Maximum ounces allowed for age and category listed

Formula = Name of medical formula. Formula module code is listed in parentheses after the formula name

Cont Size = The size of the container, in ounces unless noted, the formula comes in.

Reconstitution = Number of fluid ounces of formula that can be made from this can size using manufacturer's guidelines for dilution.

<1 mo, etc. = The number of containers that can be provided for that age range.

FW? = Indicates if this formula is available for ordering from the Formula Warehouse

Number of containers for mostly breastfed infants (IB)

Ensure Plus Institutional Not available in retail stores	8	Yes	24/case	8	113
MCT Oil (MCT)	32	Yes	n/a	32	1

Retail vs. Institutional

Some nutritionals are packaged differently for stores-retail sales versus what is known as institutional sales (e.g. PediaSure, Boost, and Ensure). Containers sold in the stores in six containers per package do not allow for the maximum issuance (e.g. 113 containers vs. 108 containers). When the Medical documentation form requests the full issuance, ordering from the Formula Warehouse can fulfill this request. The product is the same, the packaging will look different.

Medical Formulas not provided by WIC

Oregon WIC does not provide medical formula in the following situations:

- Medical provided by tube feeding (e.g. gastrostomy tube or nasogastric tube)
- Metabolic formulas for inborn errors of metabolism

Please contact your assigned Nutrition Consultant regarding the payment of these formulas by Medicaid.
